

## Course Description

This program was developed by Serono Symposia International, Inc.

This program provided nurses, pharmacists and other healthcare professionals with practical and relevant information on issues surrounding immunomodulating therapies.

### Learning Objectives

Upon completion of this program, the participant will be able to:

- Identify four immunomodulating drugs that are available for MS.
- Describe the benefits of treatment with each of the immunomodulating medications.
- Outline effective patient and family education strategies.
- List three common side effects of each of the medications.
- Describe common interventions for side effect management of each of the medications.
- Discuss the importance of injection site rotation and skin care.
- Identify barriers to patient adherence to immunomodulating therapy.
- Describe the role of the nurse in promoting long term adherence to immunomodulating therapies.
