

Course Description

This program was developed by Serono Symposia International, Inc.

This online CME course focused on the diagnosis and treatment of ovulatory disorders and is divided into four chapters, each covering topics important to understanding ovulation. The target audience includes physicians, nurses, pharmacists and other healthcare professionals interested in ovulation induction.

Learning Objectives

Upon completion of this program, the participant will be able to:

- Describe the physiologic process of the human menstrual cycle.
- Describe the process of ovulation, ovulation induction, and augmentation therapy with clomiphene citrate, menotropins, urofollitropin, recombinant FSH, and adjunct medications.
- Review the impact of age on fertility with appropriate tests available to assess ovarian reserve.
